

Requirements Detailed Report

This report displays all of the requirements defined for the current project in the order they appear in the requirements list. The requirement's details and coverage status are displayed, along with sub-tables containing the list of covering test cases, linked incidents/requirements, attached documents, associated tasks, linked artifacts and the change history

Project529:s3758028

RQ:3233-TestScenario1:Registration

Scenario 1: Test automationpractice.com & Registration function:

1. **Test if the browser is opening the automationpractice.com page**
 1. specifying the web site to be tested
 2. checking to see the above test was executed properly and see if the expected result equals the actual.
2. **Test the sign-in button that takes to the signup page:**
 1. wait until the "login" button is visible
 2. locate the "login" button and click on it:
 3. checking to see the above test was executed properly and see if the expected result equals the actual:
3. **Test the registration email field:**
 1. wait until the email field is visible
 2. Locate the email field.
 3. after locating the email field, insert the given email:
 4. checking to see the above test was executed properly and see if the expected result equals the actual:
4. **Test the registration button:**
 1. wait until the button is visible and wait for the email to be inserted:
 2. Click on submit to start the registration process:
 3. checks if the test passes and the account is registered, and checks if the URL is as expected
5. **Test the radio button to choose a gender:**
 1. wait until the radio button is visible
 2. Click on the radio button to choose gender kind.
 3. checking to see the above test was executed properly and see if the expected result equals the actual:
- 6.

Test the first name field

1. wait until the customer first name field is visible
2. locate the customer first name field, and insert the given name
3. checking to see the above test was executed properly and see if the expected result equals the actual:

7. **Test the last name field**

1. wait until the customer first name field is visible
2. locate the customer first name field, and insert the given name
3. checking to see the above test was executed properly and see if the expected result equals the actual:

8. **Test the password field:**

1. wait until password field is visible
2. locate the password field, and insert the given password
3. checking to see the above test was executed properly and see if the expected result equals the actual:

9. **Test the month drop-down menu:**

1. calling and importing Select library, and locating the month's drop-down menu
2. initiating a variable from the Select library
3. selecting the month by the value "2" which "February"
4. checking to see the above test was executed properly and see if the expected result equals the actual:

10. **Test the day drop-down menu:**

1. calling and importing Select library, and locating the day's drop-down menu
2. initiating a variable from the Select library
3. selecting the month by the value "2" which "2"
4. checking to see the above test was executed properly and see if the expected result equals the actual:

11. **Test the year drop-down menu:**

1. calling and importing Select library, and locating the year's drop-down menu
2. initiating a variable from the Select library
3. selecting the month by the value "2" which "2019"

4. checking to see the above test was executed properly and see if the expected result equals the actual:
12. **Test the address name field:**
 1. wait until first name field is visible
 2. locating first name field, and inserting the text
 3. checking to see the above test was executed properly and see if the expected result equals the actual:
13. **Test the last name in the address field:**
 1. wait until last name field is visible
 2. locating the last name field and inserting the given text
 3. checking to see the above test was executed properly and see if the expected result equals the actual:
14. **Test the address of house field:**
 1. wait until address field is visible
 2. locate the address field and insert the given address
 3. checking to see the above test was executed properly and see if the expected result equals the actual:
15. **Test the city name field:**
 1. wait until city field is visible
 2. locate the city field and insert the given city name
 3. checking to see the above test was executed properly and see if the expected result equals the actual:
16. **Test the state selection drop-down menu**
 1. initiating a new variable from the driver, and finding the state drop-down menu
 2. initiating a variable from the select Library
 3. Selecting value "2" from the state drop-down menu
 4. checking to see the above test was executed properly and see if the expected result equals the actual:
17. **Test the post code name field:**
 1. wait until postcode field is visible
 2. locate the postcode field and insert the given postcode
 3. checking to see the above test was executed properly and see if the expected result equals the actual:

18. **Test the phone number field:**
1. wait until phone number field is visible
 2. locate the phone number field and insert the given phone number
 3. checking to see the above test was executed properly and see if the expected result equals the actual:
19. **Test the alias AddressTest field:**
1. wait until alias Address field is visible
 2. locate the alias Address field and insert the given alias Address
 3. checking to see the above test was executed properly and see if the expected result equals the actual:
20. **Test the submit button:**
1. locating the submit button, and clicking on it
 2. checking to see the above test was executed properly and see if the expected result equals the actual:
21. **Test the logout button:**
1. wait until the logout button is visible
 2. locating the locate the shirts tab and click on it
 3. checking to see the above test was executed properly and see if the expected result equals the actual:

Finish: close the browser.

 3. checking to see the above test was executed properly and see if the expected result equals the actual:
5. **Test the function of adding a product to cart**
 1. wait for the page to load:
 2. locating the button to add to cart
 3. checking to see the above test was executed properly and see if the expected result equals the actual:
6. **test the button to confirm adding to cart**
 1. locate the button and add to cart
 2. checking to see the above test was executed properly and see if the expected result equals the actual:
7. **Test checkout process step 2**
 1. locate the "proceed to checkout button and click on it again
 2. checking to see the above test was executed properly and see if the expected result equals the actual:
8. **Test checkout and proceed step 3**
 1. check if the home address is correct and locate the proceed to checkout button
 2. checking to see the above test was executed properly and see if the expected result equals the actual:
9. **Test the "agree on terms and conditions" checkbox**
 1. locate the checkbox and check it
 2. checking to see the above test was executed properly and see if the expected result equals the actual:
10. **Test the final checkout step**
 1. wait until click on agree terms is done

2. locate the final checkout button and click it
3. checking to see the above test was executed properly and see if the expected result equals the actual:

11. **Test the payment method**

1. wait until types of payments are displayed
2. locate the type of payment method and click on it
3. checking to see the above test was executed properly and see if the expected result equals the actual:

12. **Test the confirmation button**

1. wait until confirmation page is displayed
2. locate the confirmation button and click on it
3. checking to see the above test was executed properly and see if the expected result equals the actual:

Finish: close browser.

Incident Detailed Report

This report displays all of the incidents tracked for the current project. The incident's details are displayed, along with tables containing the list of resolutions as well as a tabular list of attached documents, linked requirements/incidents and the change history

Project529:s3758028

IN:279-Assign an address alias for future reference. issue

In the registration process, there is a bug in the last entry field which is "Assign an address alias for future reference."

the in-field text does not erase once you type something, where it will fail the test case due to this issue and it will not be equal the expected outcome.

Type:	Bug	Priority:	3 - Medium
Status:	New	Severity:	3 - Medium
Opened By:	abdullah alrasheed	Opened On:	30-Sep-2019
Assigned To:	abdullah alrasheed	Last Modified:	01-Oct-2019

IN:296-addressNameTest&addressLastNameTest

This bug is located in the registration page. Once you type your name in the personal information section it will automatically be written in the address details. Therefore, when I wrote the test for this case, the expected result was Abdullah but was AbdullahAbdullah.

result was Alrasheed but was AlrasheedAlrasheed.
